Complex number (standard form)	a + bi
Complex number (polar form)	$r(\cos(\theta) + i\sin(\theta)) = re^{i\theta}$ $(a+bi) + (c+di) = (a+c) + (b+d)i$ $r_1(\cos(\theta_1) + i\sin(\theta_1)) \cdot r_2(\cos(\theta_2) + i\sin(\theta_2)) = r_1r_2(\cos(\theta_1\theta_2) + i\sin(\theta_1\theta_2))$
Adding complex numbers	(a+bi) + (c+di) = (a+c) + (b+d)i
Multiplying complex numbers	$r_1(\cos(\theta_1) + i\sin(\theta_1)) \cdot r_2(\cos(\theta_2) + i\sin(\theta_2)) = r_1r_2(\cos(\theta_1\theta_2) + i\sin(\theta_1\theta_2))$
	multiply the lengths, add the angles $e^{a+bi} = e^a e^{bi}$
Complex exponent	$e^{a+bi} = e^a e^{bi}$
	$length = e^a$, $angle = b$
